

Pro Screen+ Your Biometric Checkpoint Solution for Workers & Visitors

Fast. Touchless. Safe Access.

Hilmerson Safety™ provides solutions to everyday challenges on construction jobsites. We know jobsite access and attendance can be tedious and time consuming. And, with the added concern of the COVID-19 pandemic, contractors have been challenged with integrating health and safety protocols into their policies.

The Problem: Outdated, Manual Access & Attendance Procedures

- ⊗ Jobsite time and attendance traditionally is managed on pen, paper and clipboard. Rain and paper do not mix.
- ⊗ Jobsite access procedures require many touch points and close contact interactions.
- ⊗ Recent protocols require contractors to conduct visitor and worker health screening upon arrival.
- ⊗ Quickly and efficiently processing the flow of workers and visitors in a construction trailer while maintaining social distancing is difficult.
- ⊗ Time and attendance logging is difficult on busy jobsites with many workers in and out - making contact tracing and incident/accident response challenging.

The Solution: Electronic, Touchless Access & Attendance with Health Screening

- ✓ Simple to implement electronic, networkable, biometric facial recognition for attendance with optional temperature screening mounts in or outside construction trailer.
- ✓ Touchless operation allows for social distancing and efficient logging.
- ✓ Proactive, optional digital health questionnaire can be filled out on visitor's/worker's device via a QR Code prior to jobsite arrival.
- ✓ Superintendents confidently have in-the-moment time and attendance at their fingertips.
- ✓ Exposure can easily be traced and quickly communicated with optional saved attendance log.

Revolutionary Construction-Grade Safety Products That Improve Job Site Safety AND Your Bottom Line
