 **HILMERSON**
BORN IN THE FIELD. MADE IN AMERICA.

Time is money... so we designed the Hilmerson Safety Rail System™ for rapid & simple installation.

Minimal components, user friendly design, and self-contained kits all combine for simplicity and ease of use. Optional Bases, Gates, Slab/Stair Grabbers, and Parapet & Wall Mount clamps maximize guardrail flexibility on your job site.

Our market research found the cost of job-built wooden guardrails averages \$18.58/linear foot, and that does not factor in lumber cost increases as high as 30% since the start of 2017. We also found estimators are often failing to include significant "true cost" factors like transportation, disposal, inspections, and maintenance required for job-built wooden guardrails in their cost estimates.

The Hilmerson Safety Rail System™ eliminates many recurring project-based costs and allows for quick recovery of acquisition cost and provides a significant return on investment. By purchasing and deploying our safety rail system and eliminating wooden 2x4 guardrails, initial cost can be recovered in as quickly as two project deployments.

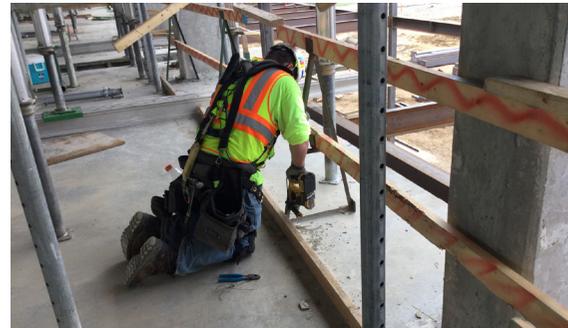

Our guardrail system "kits" simplify logistics & maximize efficiency & space.

The Problem:

WOODEN GUARD RAILS

- ⊗ Dangerous, error prone, and undependable wooden guard rails
- ⊗ Extensive time to install, maintain, remove, store and transport
- ⊗ Wasteful, not reusable, not eco-friendly
- ⊗ Losses on costly OSHA fines and repeat expenses
- ⊗ Negative factors decrease ROI, safety, as well as, increased costs for labor, purchases, and disposal, storage, and shipping of guardrails

The Solution:

HILMERSON SAFETY RAIL SYSTEM™

- ✔ Galvanized heavy duty 13g steel, safe, exceeds OSHA standards
- ✔ Quick and easy installation, removal, storage, site positioning and shipping
- ✔ Pays for itself. Our safety rail system can be reused and re-rented for years
- ✔ Saves on costly disposal fees, processes, OSHA fines and work losses
- ✔ Revenue Stream: Profit from reuse & re-renting, one-time investment makes money

"The Hilmerson Safety Rail System™ has been absolutely convenient for our project. With the speed of installation and durability of the product we could not ask for more. I hope to never again see the old wood rail system on my sites. The old saying in construction has always been "Never trust a guardrail...", Well, this system has our site in full trust – it will hold up through the construction activities of our site."

-SAFETY MANAGER, MORTENSON

Protect & Secure While Saving Time & Money
